

MEETING THE PROJECT MANAGEMENT CHALLENGE

2004

Abstract

“Improving the Technology Infusion Process”

As NASA prepares for the new exploration initiative, improving new technology infusion into flight projects has become critical to enabling missions and to their overall technical and programmatic success. Project managers will be faced with identifying appropriate new technology options and managing technology readiness realities such as changing technical requirements and unknown risk, while insuring mission safety and reliability. Project managers will have to rely more heavily on collaboration within NASA and with industry. This panel discussion brings together four senior executives from industry, NASA headquarters, and GSFC who will share their experiences and perspectives on your questions, concerns and comments.
